PV SHEATH TUNNELER SET

Facilitates Tunneling and Graft Placement from Start to Finish
PV SHEATH TUNNELER SET

Facilitates Tunneling and Graft Placement from Start to Finish

For Selection
- Interchangeable sheath lengths for either above knee, below knee, or extra-anatomic graft placement
- Tunneling for placing grafts up to 23 inches in length
- Used in tunneling for peripheral vascular and extra-anatomic bypass procedures

For Connection
- Interchangeable handle connects on either end of the inner rod
- Two bullet tip sizes, each interchangeable at the ends of the inner rod corresponding to the sheath's inner diameter

For Direction
- Interchangeable handle allows direct tunneling from either the proximal or distal incision site, based on surgeon preference or need for control
- Hole at each end of the rods allows for pulling the graft through the sheath in either direction for optimal graft placement

For Protection
- Outer sheath for graft positioning – helping to prevent twisting or kinking, or compromising the graft's integrity; will protect the graft when using a tourniquet technique for distal anastomoses with a bloodless field¹

</table>

¹ The Set comprises one of each component.

Note: Prior to utilizing the PV Sheath Tunneler Set, verify that the vascular graft outer diameter fits within the sheath. (The 11 mm I.D. sheath is for 10 mm O.D. grafts.)
