Simon Nitinol® Vena Cava Filter

**Indications for Use:**
The Simon Nitinol® Filter is indicated for use in the prevention of recurrent pulmonary embolism via placement in the vena cava in the following situations:
- Pulmonary thromboembolism when anticoagulants are contraindicated
- Failure of anticoagulant therapy in thromboembolic disease
- Emergency treatment following massive pulmonary embolism where anticipated benefits of conventional therapy are reduced
- Chronic, recurrent pulmonary embolism where anticoagulant therapy has failed or is contraindicated.

**Contraindications for Use:**
The Simon Nitinol® Filter should not be implanted in:
- Pregnant patients when fluoroscopy may endanger the fetus
- Patients with vena cava diameters greater than 28 mm
- Patients with vena cava diameters greater than 24 mm if those patients are scheduled for surgery requiring general anesthesia within two weeks
- Patients with risk of septic embolism.

**Potential Complications:**
- Migration of the filter. This may be caused by placements in oversized venae cavae, larger migrating thrombus dislodging the filter from its deployed position, or perforation of the vena cava wall by the legs of the filter. This has been reported despite filter usage.
- Perforation of the vena cava wall by the legs of the filter. This is not known if thrombus passed through the filter or via collateral means. Contraindications for Use should be weighed against the inherent risk/benefit ratio for a patient who is experiencing pulmonary embolism, or who is likely to do so without intervention.

Please consult product labels and package inserts for indications, contraindications, hazards, warnings, cautions and instructions for use.

The Simon Nitinol® Filter is one of the most established devices on the market.

The Simon Nitinol® Filter’s proven design continues to provide patients with effective prevention of pulmonary embolism.

- **Over Two Decades of Performance**
- **Indicated for Permanent Placement**
- **Effectively Traps Emboli with Long-Term Caval Patency**

**First Level** is a Proven Conical Design

- **Second Level** Centers the Filter
- **Adapts to a Wide Range of Caval Sizes up to 28 mm**

**Low Profile Delivery System**

- **7F ID Delivery System**
- **Minimizes Entry Site Complications**
- **Versatile Filter Platform for Multiple Access Sites**
